Dear Mr. Longo:

To confirm our discussions on May 7, 1986, Ethyl Petroleum Additives, Inc. plans to construct a tank car access platform at Track 21 adjacent to the NP Warehouse. The construction in the contaminated area would be limited to removing four circular eight inch diameter concrete pads, so that piling may be driven to support the steel I-beam supports for the access platform.

When removing the concrete pads all appropriate previously approved plans that address health and safety concerns as well as disposition of contaminated materials will be utilized. We plan to begin this construction the week of May 19, 1986.

If you have any questions on this matter please contact me at 618-274-4000.

Sincerely,

A handwritten signature in cursive script, appearing to read "M. J. Bonaventure".
